TEST TAKING TIPS

Colleen Nevins
DNP, RN, CNE
OBJECTIVES

1. To discuss strategies for multiple choice application questions on exams.

2. To develop skill in applying knowledge to practice related to multiple choice and multiple selection questions.

WHY, OH WHY?
AND WHAT IS THE PURPOSE?

Well designed multiple choice questions allow for engagement and evaluation in application of knowledge to nursing practice.

Multiple choice questions enhance and evaluate critical thinking.

Optimal patient outcomes are effected by the ability of nurses’ to critically think.
#1- ALL IN THE PREP

Learn the content to understand relevancy to practice versus memorizing, which requires

* Reading the assigned material
* Practicing test questions
* Discussion with others, e.g., group work
* Questioning and seeking more information - By asking why, when, where, who, how?
#2 — THE BIG QUESTION

NCLEX Style Question Components:

1. **Stem**: scenario and presentation of issue (key words)

2. **Question**: what the question is asking

3. **Distractors**: incorrect but possible answers

4. **Key Words**: set the direction of care or response
Stem: In passing the physician for your patient in the hospital hall, he smiles and mentions he will be ordering an x-ray. You enter the patient's room to find her crying. She states "Dr. X was so abrupt and rude. I have never been treated so badly. I want to talk to a supervisor."

Question: As the nurse, your best initial response is?

Distractors:
1. "What level of supervisor do you want to talk to?"
2. "Dr. X is always rude to everyone. Don’t take it personally."
3. "What do you want to talk to a supervisor about? Perhaps I can help."
4. Correct Answer: "You seem upset."
**Stem:** Patient presents with severe dyspnea with a history of COPD. ABGs show the patient is in respiratory acidosis with an O2 sat of 87%. The patient appears to be gasping for air. The patient’s family asks what is going to be done for the patient.

**Question:** As the nurse, your best initial response that shows understanding of the appropriate plan of care is?

**Distractors:**
1. “We are going to start an IV and increase the oxygen.”
2. “The doctor is reading the chest x-ray and should be in shortly.”
3. “We need the patient to take slow deep breaths, and cough up secretions to clear the airway.”
4. **Correct Answer:** “I’ve called respiratory therapy who are coming to give the patient a breathing treatment.”
#3 – Cues in Answers

<table>
<thead>
<tr>
<th>INCORRECT</th>
<th>CORRECT</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Do not promote communication</td>
<td>• Promotes open communication</td>
</tr>
<tr>
<td>• Discounts patient’s feelings</td>
<td>• Use of paraphrasing</td>
</tr>
<tr>
<td>• May make patient feel inadequate or defensive</td>
<td>• Acknowledges patient’s feelings</td>
</tr>
</tbody>
</table>
#3 – Cues in Key Words

- Always
- Most likely or least likely
- Initial
- Priority or best
- Every
- Entire
- Only
- Never or rarely
#4 – Tips

- Read test question carefully.
- What is the question asking? Do not read into the scenario or question.
- Read the responses carefully.
- Re-read the scenario, question, and responses.
- Delete the obvious incorrect responses.
- Move onto the next question, and come back to the question if stuck.
#4 – Tips

Think Maslow!

#1. Airway – Breathing – Circulation

#2. Safety/Disability

#3. Communication

#4. Nursing Process
#5 — QUESTION/ANSWER SAMPLE

**Question:** As a nurse, which of the following is your first priority of providing care?

**Answers:**
1. Patient needs a dressing change
2. Patient needs suctioning
3. Patient is in pain
4. Patient is incontinent

After answering, now place each in order of priority…
Question: As a nurse, which of the following is your first priority of providing care?

Answers in order of priority:

#4. Patient needs a dressing change

#1. Patient needs suctioning

#2. Patient is in pain

#3. Patient is incontinent
Important elements: patient (age, gender, race); issue or medical problem (patho); details (signs/symptoms, medications, surgery); time (early or late, pre- or post-op surgery)

If unsure, make an educated guess by
- Eliminating distractors, which can increase your correct choice of options by @ 25 - 30%
- If choice is between 2 answers, choose the most logical or common sense response; 50 – 50 chance of being correct
#6 – FOCUS ON SUCCESS

SUCCESS
Because you too can own this face of pure accomplishment.
